

When your microphone system has suffered from previously unknown interferences, and you subsequently seek advice, then make sure you provide the following data:

1) The location of the microphone installation

Address:

Room:

Floor Level:

Option: organizer of the event or name of production

2) The period the interference

Time of interference (start)

End of your observation

Was the interference constant during the production?

3) The frequencies of the affected microphone systems

Please provide a small frequency table

4) Field strength of the interference (in the off microphone)

How many bars on the individual receiver display?

(Please indicate when possible for each individual microphone receiver)

5) The wireless microphone system used, for example:

Transmitter type:

Receiver type:

Antenna Type:

Splitter / booster / combiner type

6) Your contact details:

Contact person:

Phone and/or email address:

To be contacted on: (from - to, weekdays or weekends)

7) If possible, this additional information can be very helpful

An audio or video / audio recording.

(a "voice memo" from a mobile phone is very helpful)

An "image" of the interference on a spectrum analyzer or scanning receiver (sketch, diagram or screenshot)
